1 General / Usage Instructions

1.1 Guarantee notice

If the instructions contained in this operator's manual are not observed then any claims under guarantee shall be void.

1.2 General

All parts coming into contact with media are designed for water quality to DIN 19643.

The air pads are of state-of-the-art technology and they were manufactured with great care under constant quality control conditions.

The operator's manual contains important instructions on how to use the air pads safely, properly and economically. The instructions must be strictly adhered to in order to avoid danger and to ensure that the air pads have a long useful life.

This manual does not take into account local regulations, the observance of which is the responsibility of the operator – also on behalf of installation personnel that may be involved.

1.3 Usage Instructions

Neither the entire unit nor parts thereof must be used in other systems. You are expressly directed to use it only in accordance with these instructions.

Under no circumstances must air pads be used in a way that exceeds the fig.s quoted in the technical specification. In case of doubt, please contact your customer service or the manufacturer.

2 Safety instructions

Please read this operator's manual carefully before you install and operate the air pads. Make sure that you have understood everything.

2.1 Safety Instructions for the Operator

1. Regardless of what nature they may be, repairs must only be carried out by qualified persons. If necessary, the pool should be emptied.
2. The operator must ensure that
 - the operator's manual is always available for users to read,
 - the instructions in the operator's manual are being observed.
3. All parts that come into contact with the medium are resistant to an absolute salt content of up to 0.75% (4500mg/l Cl⁻). If the salt concentrations are greater than this, the manufacturer must be consulted.

3 Unit Description / General Technical Data

The system complies with **VDE (Association for Electrical, Electronic & Information Technologies) regulations**.

The air pads are delivered as 3 assemblies:

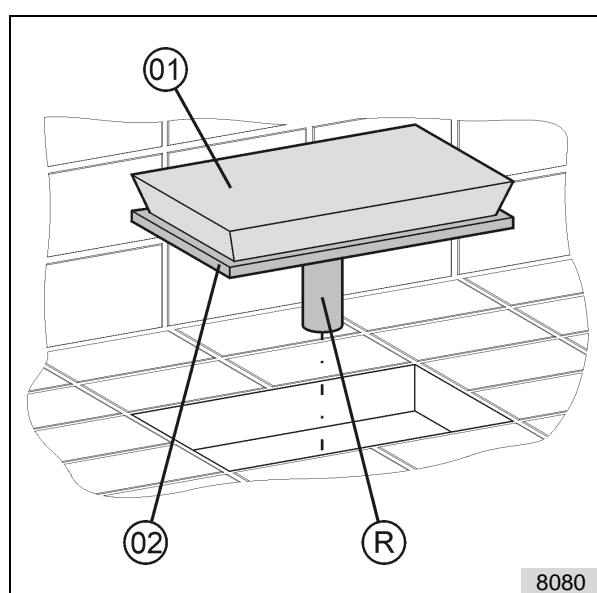

- I Installation kit
- II Assembly kit
- III Blower installation kit

3.1 Technical Data

Dimensions in mm	200 x 200	240 x 240	300 x 300	300 x 500	400 x 400	480 x 480	500 x 500
Air connection	DN 32						
Air flow rate	25 m ³ /h	30 m ³ /h	40 m ³ /h	60 m ³ /h	65 m ³ /h	95 m ³ /h	100 m ³ /h
Operating pressure	150 mbar						
Max. perm. pressure	250 mbar						

4 Air Pads

4.1 Shuttering / Concrete-tile pool and Concrete pool with brush-applied sealant

R Pipe
 01 Polystyrene
 02 PVC plate

fig. 1

Position the installation kit precisely within the tile grid and determine the exact centre for the floor flange.

Next drill a hole with the appropriate diameter in the floor shuttering for the pipe (R).

Then fasten the installation kit in the desired position to the concrete reinforcing bars and affix using the supporting feet, if necessary. The upper edge of the poly-styrene part (01) must be flush with the concrete.

Important:

If the installation is to be carried out without using the concrete reinforcing bars then the height of the supporting feet must be stated specifically with the order.

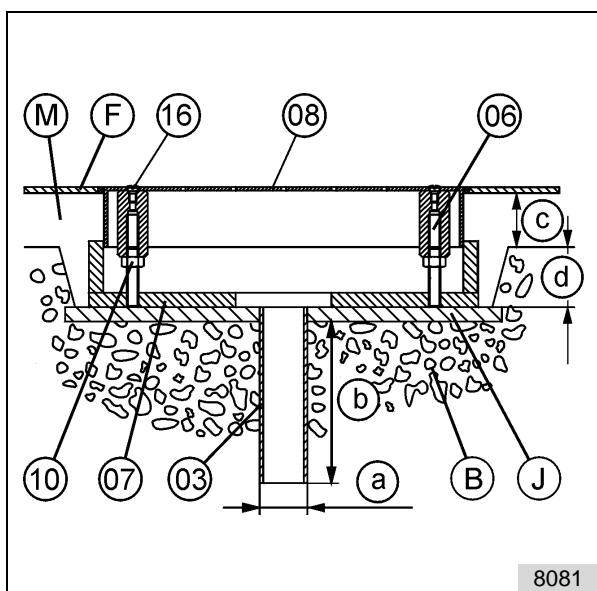

Attention!

The side edges of the installation kit must be adjusted exactly along the tile grid lines as only a fine adjustment is possible when the air pad is later installed.

4.2 Shuttering removal / Concrete-tile pool and Concrete pool with brush-applied sealant

Once the shuttering has been removed from the pool, the polystyrene part (01) is removed. The PVC plate (02) underneath with the pipe (R) remain in the concrete.

4.3 Installation / Concrete-tile pool

a =	ø 40 DN 32
b =	350 mm
c =	min. 10 mm / max. 50 mm
d =	62 mm
B	Concrete
F	Tiles
J	Flange
M	Mortar
03	Installation kit
06	Adjusting nut
07	Assembly frame
08	Air pad
10	Lock nut
16	Mounting screw

fig. 2

Attention!

The following steps must be carried out prior to laying the pool floor (M) and the tiles (F).

Glue the PVC assembly frame (07) to the flange (J) of the installation kit (03). Please watch the tile grid closely!

Set the adjusting nuts (06) so that the upper surface of the air pad (08) is flush with the upper edge of the tiles (F) and screw it in place into the PVC assembly frame (07). Then check the installation level by putting the air pad (08) in place.

Lock the adjusting nuts (06) with lock nuts (10) and fasten the air pad (08) to the adjusting nuts (06) with the screws (16).

In tiling up to the air pad (08) please watch the expansion gap.

4.4 Installation / Concrete pool with brush-applied sealant

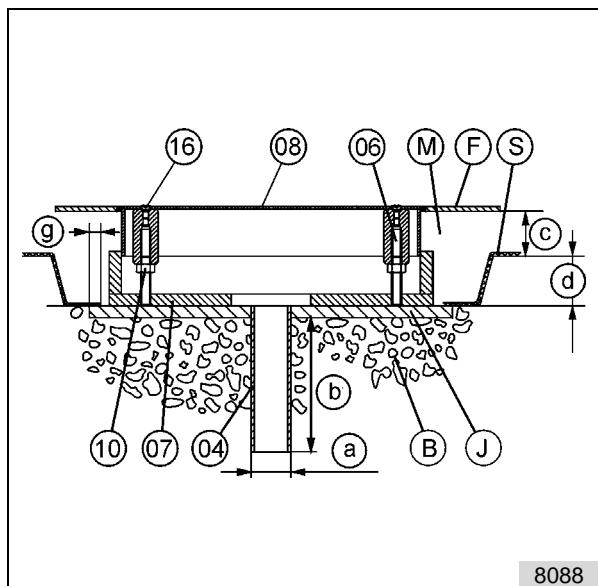

fig. 3

a =	ø 40 DN 32
b =	350 mm
c =	min. 10 mm / max. 50 mm
d =	62 mm
g =	15 mm
B	Concrete
F	Tiles
J	Flange
M	Mortar
S	Brush-applied sealant
04	Installation kit
06	Adjusting nut
07	Assembly frame
08	Air pad
10	Lock nut
16	Mounting screw

The swimming pool can now be lined with brush-applied sealant.

Important:

The brush-applied sealant must not be spread on the entire flange (J) as it is glued to the PVC assembly frame (07). Therefore spread the sealant only as far as 15 mm (g) over the flange (J). However, the gap between the flange (J) and the concrete (B) must be covered to ensure impermeability.

Important:

Glue the PVC assembly frame (07) to the installation kit (04). Please watch the tile grid closely!

Set the adjusting nuts (06) so that the upper surface of the air pad (08) is flush with the upper edge of the tiles (F) and screw it in place into the PVC assembly frame (07). Then check the installation level by putting the air pad (08) in place.

Lock the adjusting nuts (06) with lock nuts (10) and fasten the air pad (08) to the adjusting nuts (06) with the screws (16). In tiling up to the air pad (08) please watch the expansion gap.

4.5 Shuttering / Concrete-liner pool

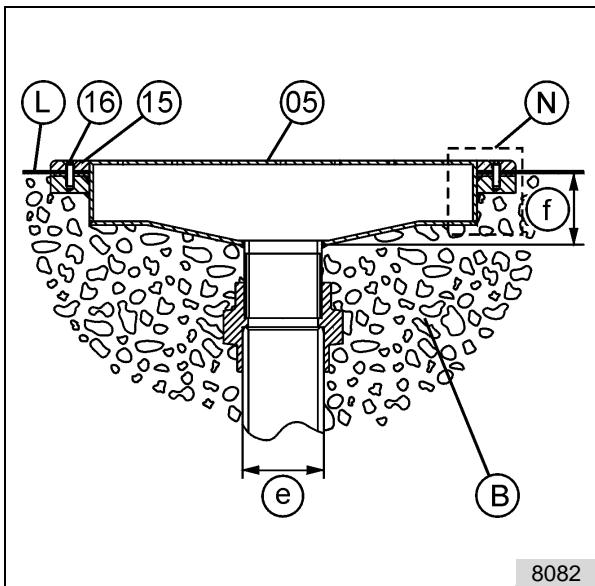

fig. 4

e = $\varnothing 63 \text{ DN } 50$
f = 60 mm
B = *Concrete*
L = *Liner*

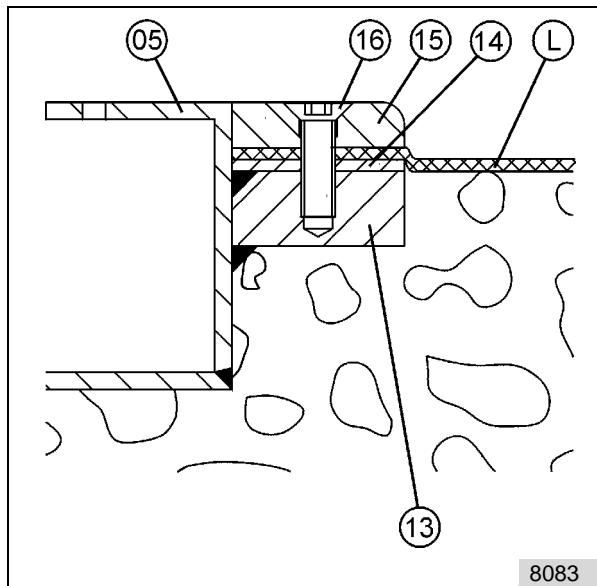

fig. 5: detail N

05 *Stainless steel housing*
13 *Clamp frame*
14 *Clamp gasket*
15 *Clamp ring*
16 *Mounting screw*

Determine the exact position of the air pad. Then drill the pipe hole with the correct diameter.

Remove the protective foil from the stainless steel housing (05) and dismantle the clamp ring (15) and the gasket (14).

Then insert the stainless steel housing (05) into the floor or seat shuttering and fasten to concrete reinforcement and shuttering.

The upper edge of the clamp frame (13) must later be flush with the upper edge of the concrete (B). So please take into account the pool floor or insulation.

4.6 Installation / Concrete-liner pool

see fig. 4 and 5

After inserting the stainless steel housing (05) position the liner (L) so that it covers the clamp frame (13) and reaches up to the installation kit.

Then insert the gasket (14) and clamp ring (15) and fasten with the screws (16).

4.7 Pipework diagram

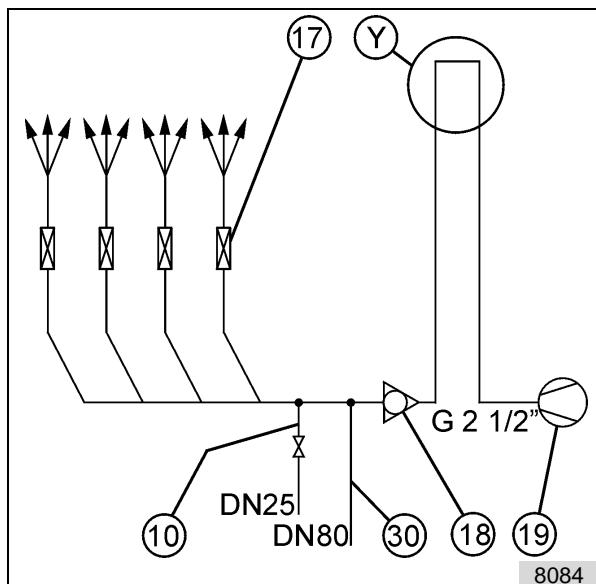

fig. 6: Suggestion for air pad
 300mmx500mm
 (4 connections in a row)
 Delivery rate per
 connection: 60m³/h

- 10 Drain pipe
- 17 Shut-off unit
- 16 Non-return valve
- 19 Blower, $P = 2.9 \text{ kW}$
- 30 Fresh water pipe
- Y Air loop
(this must be placed a minimum of 0.5m above the surface of the water).

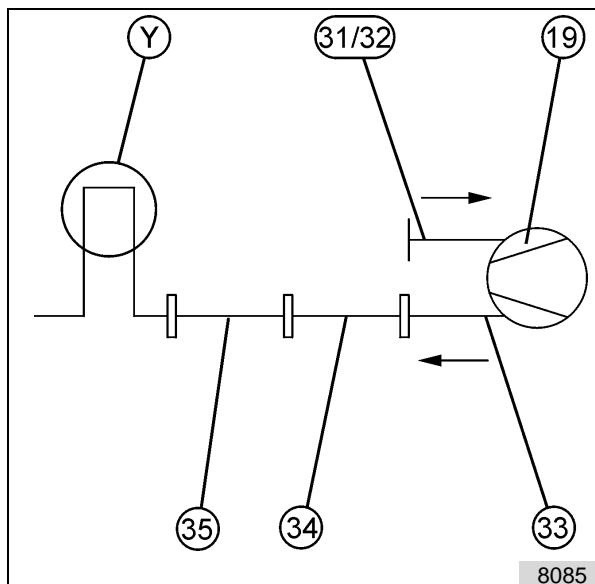

fig. 7: When blower accessories are fitted (schematic diagram)

- 19 Blower
- 31/32 Fine filter / muffler
- 33 Heat-resistant pipe
- 34 Intermediate piece
(only for installation of 31/32)
- 35 Pressure control valve
- Y Air loop
(this must be placed a minimum of 0.5m above the surface of the water).

Important:

The suggested pipework diagram takes no account of actual local conditions.

Attention!

To determine the exact dimensions of the pipes all elements that contribute to the flow must be taken into consideration.
 Most importantly no 90° T-pieces or angles must be employed. Furthermore all shut-off devices such as flaps or sliders as well as measuring detectors etc. must be included in the flow reduction calculation.
